

Demonstration of Proposed Features

Date	30 June 2026
Team ID	
Project Name	Credit Card Approval Prediction System

Demonstration of Proposed Features:

This document captures all the features that were proposed during the project planning phase and tracks whether each feature was successfully implemented and demonstrated. It serves as evidence of the team's ability to deliver on the proposed solution.

S.No.	Feature Name	Description	Status (Implemented / Partial / Pending)	Demonstrated (Yes / No)	Remarks
1	Applicant Data Input	Accepts applicant details such as demographics, income, employment status, education, family information, and other financial details through a web form.	Implemented	Yes	Working successfully
2	Data Preprocessing	Cleans the dataset by handling missing values, removing duplicates, encoding categorical variables, and scaling features for model training.	Implemented	Yes	Successfully completed
3	Credit Card Approval Prediction Model	Predicts whether the credit card application will be Approved or Rejected using machine learning algorithms such as Logistic Regression, Decision Tree, Random Forest, and XGBoost.	Implemented	Yes	Good prediction accuracy
4	Flask Web Application	Provides a user-friendly web interface for entering applicant details and viewing prediction results.	Implemented	Yes	Fully functional
5	Prediction Result Display	Displays the prediction result (Approved/Rejected) instantly along with the confidence score/probability.	Implemented	Yes	Results shown instantly
6	Model Deployment	Deploys the trained machine learning model (model.pkl) using Joblib serialization and integrates it with Flask for real-time prediction.	Implemented	Yes	Successfully deployed

Feature Implementation Summary:

Total Features Proposed	6
Total Features Implemented	6
Total Features Demonstrated	6
Overall Implementation Rate (%)	100%
