

Solution Architecture

|               |                                 |
|---------------|---------------------------------|
| Date          | 06 July 2026                    |
| Team ID       |                                 |
| Project Name  | Credit Card Approval Prediction |
| Maximum Marks | 4 Marks                         |

Layer Descriptions

| Layer                   | Responsibility                                                                                        |
|-------------------------|-------------------------------------------------------------------------------------------------------|
| Presentation Layer      | Renders the applicant data-entry form and displays the prediction result to the user                  |
| Application / API Layer | Handles HTTP requests, validates inputs, orchestrates calls to the ML layer, and formats the response |
| Machine Learning Layer  | Applies the preprocessing pipeline and runs inference using the selected trained classification model |
| Data Layer              | Stores the historical dataset used to train and validate the models                                   |
| Model Store             | Persists the serialized best-performing model for reuse at inference time                             |
| Deployment Layer        | Hosts the trained model on IBM Watson Machine Learning for scalable, real-time cloud access           |
